

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claim 1 (Currently amended): A communication portable terminal device, comprising:

a light source, disposed in a housing; and

a light guiding panel, disposed in the housing for guiding a light from the light source,

wherein the light guiding panel includes:

a light transmitting member having ~~an almost~~ a plate like shape, wherein the light transmitting member has:

an incident portion on which the light emitted from the light source is incident, and provided on a back face of the light transmitting member; and

an emitting portion from which the light transmitted from the light source is emitted, and provided on a front face of the light transmitting member; and

reflecting units for reflecting plural times the light emitted from the light source and incident on the incident portion and guiding the light to the emitting portion, wherein the reflecting units comprise a first reflecting unit and a second reflecting unit, wherein the first reflecting unit is provided on the front face of the light transmitting member and

the second reflecting unit is provided on the back face of the light transmitting member,

wherein the light transmitting member further includes a V-shaped groove, and the V-shaped groove is provided in the vicinity of a surface boundary between the first reflecting member and the light transmitting member.

Claim 2 (Currently amended): The communication portable terminal device according to claim 1, wherein the second reflecting unit includes a colored reflecting print portion ~~having a peculiar color in a~~ with high reflectance on the back face side of the light transmitting member.

Claim 3 (Currently amended): The communication portable terminal device according to claim 1, wherein the incident portion is ~~formed in a curved concave surface on the back face of the light transmitting member~~ formed on the back face of the light transmitting member and arranged just above the light source.

Claim 4 (Currently amended): ~~The communication portable terminal device according to claim 1,~~ A communication portable terminal device, comprising:

a light source, disposed in a housing; and

a light guiding panel, disposed in the housing for guiding
a light from the light source,

wherein the light guiding panel includes:

a light transmitting member having a plate like shape,
wherein the light transmitting member has:

an incident portion on which the light emitted
from the light source is incident, and provided on a back face
of the light transmitting member; and

an emitting portion from which the light
transmitted from the light source is emitted, and provided on a
front face of the light transmitting member; and

reflecting units for reflecting plural times the light
emitted from the light source and incident on the incident
portion and guiding the light to the emitting portion, wherein
the reflecting units comprise a first reflecting unit and a
second reflecting unit, wherein the first reflecting unit is
provided on the front face of the light transmitting member and
the second reflecting unit is provided on the back face of the
light transmitting member,

wherein the first reflecting member is provided at
approximately a center of the light transmitting member, and a
V-shaped groove is provided at a surface boundary between the
first reflecting member and the light transmitting member.

Claim 5 (Previously presented): The communication portable terminal device according to claim 1, wherein the housing comprises a foldable structure, and includes:

an upper housing having a liquid crystal display unit on an inner side surface thereof; and

a lower housing having an operating key provided on an inner side surface thereof opposed to the inner side surface of the upper housing when the upper housing and the lower housing are set in a closing state, the lower housing being rotatably coupled to the upper housing through a hinge portion; and

wherein the light guiding panel is disposed on an outer side face that is opposite to the inner side surface of the upper housing, and the emitting portion on the front face faces an outside.

Claim 6 (Previously presented): The communication portable terminal device according to claim 1, wherein the first reflecting member and the second reflecting member repetitively reflect the light emitted from the light source to propagate the light in the light transmitting member and to emit the light from the emitting portion.

Claim 7 (Cancelled):
